

Millersville, Easterns y normalización

Reconciliación completa de conversación cada 30 segundos · 12/09/26, 5:16:08 p. m. · America/Bogota

PASS 15/15 casos de integración local

PASS 348 tests unitarios

4 skips intencionales, sin bloqueo

Resumen ejecutivo

Se reprodujeron localmente webhooks firmados y mensajes entrantes para Millersville, Easterns y Action Pre Owned Cars English. La corrección elimina el falso positivo que podía convertir el modelo Toyota Tacoma en la localidad Tacoma, VA, conserva Elkton MD cuando se declara explícitamente y completa los campos faltantes al releer la conversación completa durante el poll de 30 segundos.

También se cubrieron los incidentes reportados: Davila conserva nombre, Toyota Trail Hunter, **2000 + trade-in** y timeline; el caso Hummer conserva vehículo, Cash y today; documentos, identificación y banco permanecen vacíos si la persona no los declara. Resultado: **todos los criterios de esta matriz PASS.**

Causa raíz encontrada: el extractor de localidades generaba n-gramas demasiado amplios sobre todo el transcript y no distinguía con suficiente fuerza una marca/modelo de una ciudad. Además, el normalizador tenía huecos para marcas/modelos y frases de entrega de vehículo. Se corrigieron los límites de palabra, la evidencia contextual de localidad, el catálogo de vehículos y la combinación de down + trade-in. El reconsultor de 30 segundos ya existía; el fallo observable estaba en la reconciliación/normalización, no en la ausencia del temporizador.

AC-20	Sin bloqueos de infraestructura	PASS	15/15 integración local y 348 tests unitarios PASS; 4 skips intencionales	12/09/26, 5:16:08 p. m.

Captura local del resultado

Captura generada desde la ejecución local; no representa una consola Neon/GHL ni una prueba externa.

Ruteo Easterns y rond robin

La consulta del catálogo local resolvió las localidades; no se agregaron ciudades quemadas al arnés. El resultado de Easterns siguió la prioridad MD/VA y rotaciones configuradas.

Ciudad/estado	Dealer asignado	Resultado	Pregunta predicha
Baltimore MD	Easterns Rosedale	PASS	¿Tienes identificación y comprobante de ingresos?
Baltimore MD	Easterns Laurel	PASS	¿Tienes identificación y comprobante de ingresos?
Newark NJ	Easterns Rosedale	PASS	¿Tienes identificación y comprobante de ingresos?
Silver Spring MD	Easterns Laurel	PASS	¿Tienes identificación y comprobante de ingresos?
Washington DC	Easterns Sterling	PASS	¿Tienes identificación y comprobante de ingresos?
Waldorf MD	Easterns Laurel	PASS	¿Tienes identificación y comprobante de ingresos?
Waldorf MD	Easterns Sterling	PASS	¿Tienes identificación y comprobante de ingresos?
Richmond VA	Easterns Sterling	PASS	¿Tienes identificación y comprobante de ingresos?

Millersville: Easterns Millersville → Easterns Nissan of White Marsh → Easterns Millersville → Easterns Nissan of White Marsh → Easterns Millersville → Easterns Nissan of White Marsh

Action Cars: el caso en inglés fue asignado a **Action Pre Owned Cars English**; el payload se procesó por el endpoint local con dealer separado por catálogo/configuración.

Incidentes de normalización

Campo	Resultado QA
real_name	Davila Davila y Ana Rivera se conservaron; no se mezcló nombre de contacto con cuerpo irrelevante.
vehicle_type	Toyota Tacoma, Toyota Trail Hunter, Hummer sut, truck, SUV, Mustang y van se capturan sin inventar localidad.
down_payment	2000 + trade-in para la frase “Quisiera ver si puedo entregar mi vehículo” + down explícito; Cash se conserva.
phone	Se conserva normalizado en el snapshot; el reconsultor no lo sustituye con texto de ciudad/modelo.
documents / identification / bank_account	Vacíos cuando no hubo declaración explícita.
purchase_timeline	“Esta semana” → this week; “Now if possible” → today.

Ventanas y reconsulta

Prueba diferenciada de 30 segundos: el primer caso quedó incompleto después del primer mensaje; se simuló +15 s y permaneció parcial/waiting_window. Se insertó después “Vivo en Elkton MD” y la respuesta con down/timeline; con +30 s el poll relejó los mensajes, actualizó snapshot/location/progress y dejó la misma conversación en queued. La evidencia guarda la misma conversation_db_id, IDs de mensajes, eventos y hashes.

Pruebas de 30 min y 3 h: se verificaron en la regresión local de ventanas con reloj controlado; no se esperaron tiempos reales. Las reglas fuera de horario usan la ventana de 3 horas y las de horario usan la espera configurada.

Regresiones y pendientes reales

- Regresión posterior:** 27 archivos de prueba pasaron; 348 tests PASS y 4 skips intencionales por integración externa/separada. El arnés nuevo pasó 15/15 casos.
- Corrección publicada antes del informe:** commit 6659b0c en GitHub.

- **Pendientes:** ninguno que bloquee estos criterios locales. La validación de una cuenta GHL real queda fuera de alcance por la regla de entorno y no se presenta como evidencia.
